

Rentokil Flea Riddance

A flea problem can quickly affect your business, and can negatively impact staff morale as well as your customer reputation. Rentokil's new flea riddance package offers a complete and cost effective solution to control flea infestations.

The Problem

- Fleas are small wingless bloodsucking insects
- They are about 3mm long and feed mainly on the blood of mammals or birds
- Their colour usually varies from black to brown, there are many different flea species of various biology and habitats
- The cat flea, *Ctenocephalides felis*, are the most commonly found on pets

At Rentokil our BPCA certified technicians can deliver safe effective treatments to ensure complete control of your flea infestation.

The Rentokil Solution

Rentokil Flea Monitoring

The monitoring trap works by attracting adult fleas from their surroundings using a heated light source. The insects are then caught on a non-toxic sticky pad which is checked as part of a standard maintenance agreement.

This technique has proven to be effective in catching fleas as these insects are attracted to heat, which mimics the heat given off by host animals.

Flea Riddance & Monitoring Package

Flea Riddance

2 part flea riddance treatment, using effective insecticides. Positioning of flea monitoring traps to assess activity.

Flea Trap Monitoring

Up to 8 visits to check the trap and assess any activity, including replacement of the sticky pad.
