## The future of pest control is here

Pests can be a big risk for commercial property owners and office managers. Any infestation involving rats, mice, moths, fleas, bedbugs or wasps can cause issues you want to avoid – either distressing staff and visitors, gnawing through critical computer cables, disrupting business operations or causing considerable damage to fittings and stock.

The problem is that offices – from a pest perspective – are a difficult environment to manage. Right now, popular city centre locations are providing the ideal conditions in which pests can thrive. Older buildings present many structural and multiple entry points. Even advanced new buildings, with wide open layouts, can be highly susceptible. On-site restaurants, cafés and staff storing snacks in their desks continually attract pests in search of food.

At Rentokil, we've been solving complex and evolving pest control issues like these for businesses for over 90 years. Our Global Science Centre is dedicated to finding and developing the most effective solutions for controlling pests before they have a chance to infest. And right now, we're delivering digital solutions with unrivalled insight, data and reporting to help you proactively manage and prevent pest infestations within your offices with a new level of efficiency and control.

## Harnessing the power of digital

Digital transformation is everywhere in business, helping entire industries change the way they work by replacing inefficient processes and working smarter.

At Rentokil, we apply exactly the same way of thinking to the pest control industry, harnessing innovation and expertise to deliver technology enabled solutions that help you to maximise efficiency, reduce the impact of infestations and get on with business.

### A new level of insight at your fingertips

myRentokil, our digital pest management reporting and analysis system, leads the way. With myRentokil, you have easy access to pest activity reports, Rentokil recommendations, interactive maps, charts, pest trend data and analytic tools. It's digital working at its best – a complete platform that harnesses the Internet of Things and Big Data to help you monitor, measure, record and report emerging pest issues within your office buildings.

### Remote monitoring and data collection

We are also proud to provide PestConnect, the world's first connected pest control system, designed to maintain a pest free environment in your business at all times

Built on an ecosystem of wirelessly connected devices, PestConnect provides 24/7 remote monitoring, rapid resolution and a continuous feed of data and insight that drives service improvement – the perfect way to monitor property with maximum efficiency and effectiveness.

### People and technology in harmony

We believe that people and technology should work together. The insight we collect enhances the expertise of our specialists. So when you work with us, you also tap into the unrivalled support, knowledge and advice you would expect from over 12,500 Rentokil technicians worldwide.

# Features that deliver transformational business value

Monitoring growing pest threats in busy office environments is a challenge. In particular, property managers need to act quickly at the first sign of a pest infestation to stop it spreading. With Rentokil digital solutions, you can manage, monitor and respond to pest activity much more effectively than ever before. How you benefit:

### Better visibility

- View real-time service records, recommendations, and pest activity insights across multiple premises 24/7
- Access facility floorplans and onsite pest management solutions online to see where pest activity is occurring
- Log and manage the progress you're making towards closing recommendations made by our technicians

### Better control

- Check signatures online for proof of service delivery
- Build and download service and pest activity reports
- See what's happening 24/7 in real-time\*

### Improved compliance management

- Store all proof of service documentation in one place
- Design and automate reporting and schedule delivery into your inbox
- Be assured that you're complying with today's ever evolving pest management regulations

### Helping you deal with the big threats to your business

Risks to offices are numerous, highly varied and all require quick action. Rodents gnawing on wires damage critical IT and electrical installations. A cockroach population can expand rapidly, spreading through ventilation shafts, piping and cable trays to infest entire properties. Pests also pose serious health and safety threat in staff canteens - with the potential to contaminate food and transmit pathogenic germs.

# Using Big Data to driving continual improvement

With 63,000 connected devices in over 14 countries worldwide, we collect huge volumes of data that we analyse to increase our understanding of pest problems and improve services. It means our digital solutions don't just give you a clearer view of your pest management operations. They also help you gain new insights and realise a new level of value.

The way we collect pest data via the myRentokil portal provides a perfect example. We regularly analyse this information to generate insights that enable us to track trends and identify new risks across your operations in real-time.

To further strengthen our offering, we have also formed industry leading partnerships with organisations like Google, PA Consulting Group and Qlik. Through these relationships, we're able to develop leading digital platforms, integrated with pioneering technologies to deliver the best possible pest control solutions.

The architecture of our digital platforms also enables us to cross-reference multiple sources of data and carry out predictive analytics. Seeing the 'bigger picture' like this allows us to get better visibility of all pest issues, identify risk, and pre-emptively provide the best possible solution for your office locations.

It's a model of continuous learning that ensures we're not just working on the best possible solutions for your business today. We're also looking far ahead towards all the emerging challenges of the future.

## What could you achieve?

How we're revolutionising pest control:

- Real-time\* online reporting for immediate evaluation of status
- Easy logging of all documentation for audit compliance
- Automated 24/7 remote monitoring of all office facilities for rapid problem identification
- Big data analytics for trend analysis, predictive analysis, continual service improvement

## Promoting Proactive Pest Management

myRentokil is an online reporting and analysis portal that allows customers with zero-tolerance of pests to be in control of their onsite pest management, 24/7.

The portal is available on multiple devices, giving customers access to pest activity information, recommendations, interactive floorplans and proof of service documentation to ensure they can stay up-to-date with their pest management programme; providing a comprehensive audit trail to support them in meeting rigorous internal and external audit standards across their entire estate.

Backed up on secure Rentokil Initial servers, data is displayed in real-time\* with scheduled, customisable reporting functionality that can be delivered directly into a recipient's inbox at a desired frequency - ensuring the business receives insights when required.

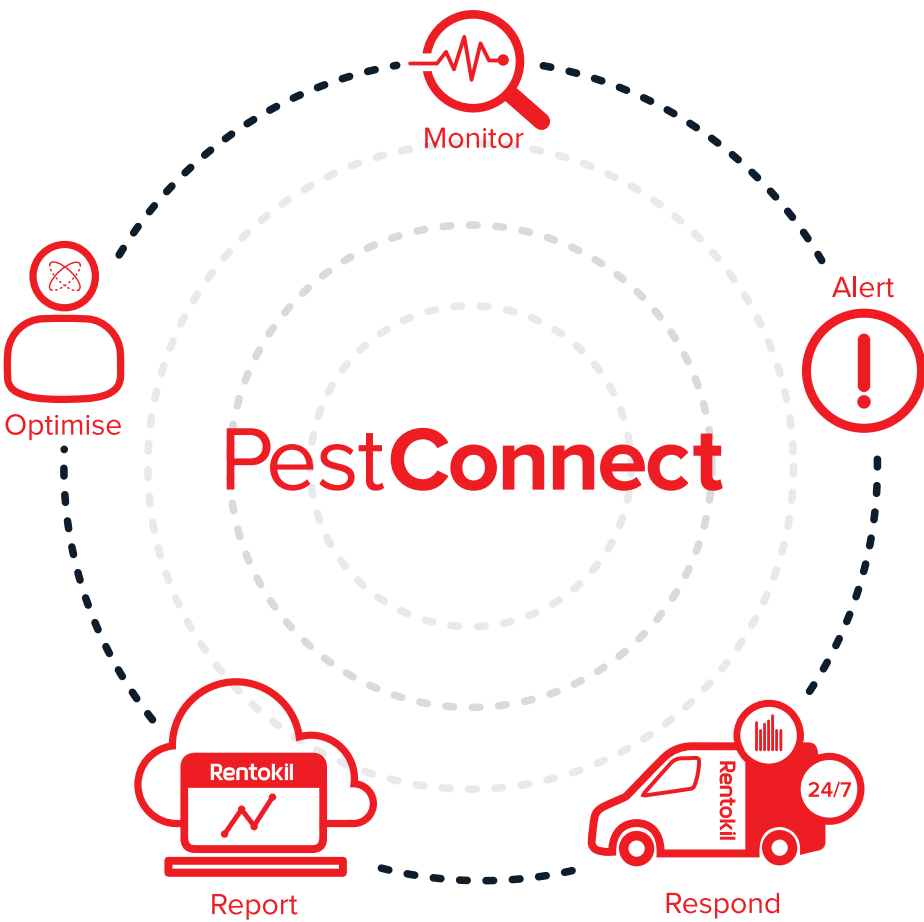

# PestConnect

## The world's first, fully integrated pest control system

PestConnect is a tailored network of devices that provide monitoring, rapid response and unrivalled protection against pests, 24 hours a day, 365 days a year.

PestConnect works independently and discreetly, without affecting your business network or machinery. Using integrated sensor technology to monitor your premises, these innovative solutions actively detect, capture or humanely kill a variety of pests. When a trap is activated, we instantly receive an alert, allowing one of our expert technicians to quickly respond.

All pest activity is recorded and uploaded to the secure myRentokil customer portal, giving you full control of your onsite pest management.
