

Sustainability Policy Statement

Sustainability & Innovation

It is becoming increasingly important to protect our environment and Rentokil Pest Control UK is committed to ensuring that we do everything we can to reduce the impact of our business in every area which may affect the environment.

Production

95% of our Pest Control products are manufactured in the UK - cutting out emissions that would have been released during transportation.

Delivery

We will plan the routes of our service drivers to reduce fuel consumption and cut down the emissions. All our new urban service vans meet Euro 5 certification.

Processing

We have reduced our own water and electricity consumption by upgrading our facilities, including investing in high-tech ecological facilities for some of our support centre offices.

Recycling

At the end of our product's lives, we ensure that as much material as possible is recycled by our external waste disposal providers.

Products

We will endeavor to source then launch products and services that will help our customers reduce their environmental impact.

Carbon Footprint

Rentokil Pest Control UK are working closely with all suppliers to find innovative ways of reducing waste and sourcing the most environmentally friendly products.

We have instigated a group initiative 'Be A Hero Waste Zero' to engage all of our colleagues both at work and at home to think of ways to conserve / reduce waste, be it materials or direct energy / water.

Reducing our carbon footprint involves the whole business, including our suppliers and customers. By working together with our customers, colleagues and suppliers we believe that Rentokil Pest Control UK can have a significant, positive, long-term impact on the environment.
