

Rentokil

The Experts in Pest Control

RADAR Riddance

A discreet, humane and effective solution to mouse control.

The RADAR riddance programme involves the use of Rentokil's innovative RADAR mouse traps to quickly and humanely reduce mouse infestations within premises.

Two RADAR riddance programmes have been designed to effectively reduce mouse populations within your premises, without the use of toxic rodenticides, which may take a long time to be effective. Or without the use of glueboards, which requires numerous visits to check and remove dead or dying mice.

RADAR Riddance offers a discreet service with a reduced visible Rentokil presence, and an effective 24 hour a day trapping program over the treatment period.

Benefits to you and your business

- **Safe & Effective:** Mice are caught, killed and contained, with no rodenticides used.
- **Humane:** Trapped mice are despatched quickly and humanely using a lethal dose of Carbon Dioxide.
- **Discreet & Unobtrusive:** Reduced visible Rentokil presence, when dealing with a mouse infestation.

How it works

Our qualified and experienced technicians will identify mouse runs and harbourage sites and will then position RADAR units in areas mostly likely to catch mice.

The RADAR riddance treatment offers two programmes designed to effectively reduce mouse populations within your premises. These include:

RADAR 40

A treatment programme using up to 40 RADAR units over a 3 day trapping period.

RADAR 80

A treatment programme using up to 80 RADAR units over a 5 day trapping period.
