

Fruit Fly **Riddance**

Rentokil's new fruit fly riddance offers a complete and cost effective solution to fruit fly infestations

Rentokil Fruit Fly Riddance

A fruit fly infestation can be detrimental to your business, not only are they associated with poor housekeeping issues, fruit flies also breed so quickly that infestations can develop rapidly.

What are Fruit Flies?

Primarily nuisance pests, fruit flies have the potential to contaminate food with bacteria and other disease-producing organisms.

Fruit flies are small, black and tan coloured flies. Approximately 3-4 mm in size they can be identified by their slow, 'lazy' flight and large red eyes.

Fruit flies breed in fermenting liquids such as juice and alcohol, so housekeeping issues can allow an infestation to develop quickly.

The Rentokil Solution

Rentokil offer two fruit fly riddance packages which can help to control fruit flies on your premises by breaking their life cycle using insecticide treatments and fruit fly traps. However, that control can only be achieved if support is provided in dealing with any housekeeping issues that are identified.

Standard Fruit Fly Riddance (2 visits)

- Expert hygiene recommendations from our experienced pest control technicians
- Mini fruit fly boxes containing fruit fly traps
- Insecticide spot treatment

Enhanced Fruit Fly Riddance (2 visits)

- For heavier fruit fly infestation
- Expert hygiene recommendations from our experienced pest control technicians
